Adam Wong

Portland, OR
BA of Computer Science, USC
adamwong246@gmail.com **LinkedIn** **GitHub**

- Typescript, JavaScript, Node, Golang, Java, Kotlin, Ruby, Rust, Lua, Solidity
- React, Nextjs, Tailwind, Rails, Android
- Kubernetes, Docker
- BDD and TDD methodologies
- certified Scrum Master
- AWS Certified Cloud Practitioner

Testeranto
freelance developer
January 2024

I developed an AI-first, Acceptance Test Driven Development Typescript test framework.

Piton Labs
software engineer
February 2023
January 2025

I joined Piton Labs to manage the development of the Accion Opportunity Fund.
- integrated a serverless NextJs app with AWS services
- managed a cross-team collaboration between PitonLabs and AOF
- developed a integration test suite as part of the CICD system
- managed the i18n translation project

---

freelance web3 developer
August 2022
January 2023

I worked with [liquid collections](#) to develop NFTs which are redeemable for consumer goods.
- maintained an extensive set of frontend and backend TS infrastructure
- wrote and tested custom solidity code to create [dynamic on-chain metadata](#).

Chroma Signet
engineer & customer success
January 2021
August 2022

I returned to Chroma to develop Signet.code, a cannabis packaging application.
- managed a Rewards programs wherein customer-claimable NFTs were attached to cannabis products
- implemented a PDF generator capable of producing unique labels at high scale
- managed customer relations to produce dynamic labels
- integrated node with multiple external APIs and our cross-platform react-native app with external SDKs

---

OpenGov
software engineer
November 2016
March 2020

I worked with a team to decompose a monolithic Rails app into a series of Typescript microservices.
- designed an open-source, functional and type-safe framework used across multiple teams with our organization
- migrated a Rails monolith into a series of micro-services
- wrote frontend SPAs in TS with Redux, Reselect and React
- implemented charts in D3 to visualize financial reports
- developed a continuous integration and delivery process with Jenkins and Docker
- deployed our apps to AWS via Kubernetes

Chroma Fund
full stack developer
February 2015
August 2016

I engineered the Meteor app "Chroma Fund", a marketplace lending platform providing investors with bundles of small business loans.
- responsible for designing UX and UI as well as implementing front-end
- supported blockchain verifiable transactions
- attended TechStars Summer 2016 accelerator program in NYC

Hubbub Health
Ruby on Rails developer
May 2013
February 2015

I worked with a large team to incentivize employee wellness with the RoR app, hubbubhealth.com.
- developed Javascript for both modern and legacy browsers
- debugged user-submitted errors with New Relic and Papertrail
- managed assets via Amazon S3
- revived an out of date Rspec and Cucumber test suite for continuous integration
- optimized high traffic queries by replacing ActiveRecord calls with raw SQL
